

MARS 5470/4470

Name: Emily Mullins

Project: Statistical analysis of allelopathy bioassay

As we discussed in class, the goal of this assessment is for you to check in with yourself about how you are doing in your final project, i.e. practice good project management skills. This is similar to what we have been doing in the weekly class assessment exercise, but turning it around. In the following exercise, remember to be kind to yourself to help keep your motivation up!

1. What were the project goals for the week?

My Goals were to continue working on making my figures presentation ready and working on the report and presentation

2. How did you meet these goals, or what did you do instead?

I got most of my figures made and the results section of the report finished, I began the presentation outline and started importing figures

3. What worked well (plusses)?

At this point it was really just working on finishing the project. It was nice to work from home because I have a bigger screen at home

4. What could be improved (deltas)?

Getting started is always a challenge for me, blocking out a set time to do things may help

5. Plans for next week (project goals and work habit goals):

Finish the presentation, present, and complete a rough draft of the final report.

6. Notes/ideas

None that I can think of right now
